## **GUJARAT TECHNOLOGICAL UNIVERSITY**

**BPLAN – SEMESTER II • EXAMINATION – SUMMER 2015** 

Sı	ıbjec		Date:03/06/2015 nantitative Methods in Planning - II	
	structi 1 2	10.30am-12.30pm  ons: . Attempt all questions Make suitable assumptions wh . Figures to the right indicate fu		j
Q.1	(a)	of children starting their form estimating the claim that mean more than 5 years, what will be (a) H0 = 5 (c) H0 >= 5  (2) Correlation analysis is us between two variables (a) cause (b) both (3) In sample linear regression (a) Regression slope (b) Dependent variable (c) Dependent variable (d) For a data set with degree of square critical value would be (a) 26.217 (b) 21.026 (c) For any decision maker, do (a) An alternative (b) Prior Probability	mal education is found out to be 5 years. For age of a child starting his/her formal education is your null hypothesis for hypothesis testing  (b) H0 <= 5 (d) H0 > 5  ed to measure of the association  (b) strength (d) none  model, b0 denotes  (b) Independent variable (d) Regression intercept  of freedom of 12 and confidence level of 99%, chi-  (b) 32.910 (d) 18.549	06
	(b)	Define following: (Any Four) (1) Type I error (2) Scatter plot (with an exa (3) Sum of square of regres (4) Expected Monetary Val (5) Expected Frequency (6) Slack variable	ample) sion	04

- Q.2 (a) A bottled water manufacturer states on the product label that each bottle contains 500 ml of water. You work in a government organization that protects consumers by testing product volumes. A sample of 500 bottles have been tested and sample mean has been 495 ml. Considering the population standard deviation to be 50, estimate whether all packed bottles contain 500ml of water or not.
  - (b) What is the difference between a two tailed hypothesis testing and a one tailed hypothesis testing? Explain in detail with diagram.

#### OR

(b) A random sample of 12 students was carried out in 1<sup>st</sup> year, B. Plan. Course. With 50% passing marks, below mentioned are their internal marks out of 50 in SQMP-II.

25 24 28 30 22 14 18 27 28 16 24 25

Assuming that this sample came from an underlying normal distribution, investigate the claim that its mean exceeds the passing marks.

Q.3 Gujarat is planning a new city on the lines of Gandhinagar. Majority of infrastructure provisions have been worked out, but for understanding the electric consumption (MW/day) 5 cities have been studied in respect to their population (LAKHS).

Population (Lakhs)	Electric Consumption (MW) / Day
15	5
22	7
7	4
12	6
18	8

For the given data set

- (a) Draw a regression line model diagram
- (b) Estimate the amount of electric supply required for population of 25,00,000 and how much population would be optimum for an electric supply of 10 MW / day

OR

05

**05** 

### Q.3 For above given data

(a)	What are the values of SST, SSR and SSE	05
<b>(b)</b>	What is coefficient of determination	05

**Q.4** 

X	У
35	100
42	125
28	175
52	220
47	180

For the above given data

(a) Find the value of r
(b) Plot a regression line diagram
05

### OR

Q.4 A real estate developer is planning to develop a township on a piece of land. The investment requirement for the project is around Rs.10 crores and if the project gets completely sold out then he will generate of profit of Rs. 35 crores. However looking the current scenario, there are only 40% chances that the project will get completely sold out, so under that situation he will have to incur the loss of Rs. 10 crores.

He has also got an offer to sell off his land, in that scenario he will out rightly make a profit of Rs. 8 crores.

For the above given situation

- (a) What decision should the developer take under
  - 1. Maximax criterion
  - 2. Maximin criterion
  - 3. Maximum likelihood criterion
  - 4. Even state of probabilities
  - 5. Given state of probabilities
- (b) 1. What is maximum amount of money that he should invest in hiring a market 05 specialist?
  - 2. Prepare a decision tree for even and given state of probabilities

05

Q.5

A survey 20 students from different parts of the state has been conducted to identify various stream options chosen by them.

Name of District/ Career Options	Science	Commerce	Art
Ahmedabad	6	12	2
Rajkot	8	8	4
Surat	5	9	6
Vadodara	5	10	5
Kachchh	15	4	1

- Find out critical value for chi-square analysis for the above given data for confidence level of 95%, 97.5% and 99%
- (b) Is there a relationship between student opting for stream and the district he/she is coming from?

### OR

Q.5 For a given farmland of 240 acres, what amount of wheat and cotton should be grown to earn maximum profit?

The farmer makes a profit of Rs. 400 / acre from wheat and Rs. 300 / acre from cotton, however wheat takes 2 hrs. / acre of labour to harvest and cotton takes 1 hour / acre to harvest. He only has a total of 320 hours of labour that he can invest in this.

- (a) List down the decision variables, objective function and constrains for the above given situation and with the help of graphical method, solve the above given situation
- (b) Will there be any change in the situation if the area under cotton is restricted to maximum 40 acres? If yes, provide the maximum profit earning breakup for this situation.
