| | ECHNOLOGICAL UNIVERSITY ESTER - I • EXAMINATION – WINTER 2014 |

| Subject Code: 1015004 Date Subject Name: Structure-I | | | e: 26-12-2014 | |
|---------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|--|
| Ti | me: 1 | ne: 10:30Am to 12:30 Pm Total Marl | | |
| | | Attempt all questions. Make suitable assumptions wherever necessary. | | |
| Q.1 | (a) | Give the importance of structure design in Architecture. | 05 | |
| | (b) | List out various structural members in building and explain following with neat sketch: 1) Foundation 2) Beam 3) Column 4) Slab | 05 | |
| Q.2 | (a) | What are the different types of structures and differentiate between Load bearing structure and Framed structure. | 05 | |
| | (b) | Define following: (with sketches) 1) Dead Loads 2) Law of Parallelogram 3) Composition of Forces OR | 05 | |
| | (b) | Define following: (with sketches) 1) Wind Loads 2) Lami's Theorem 3) Resolution of Forces | 05 | |
| Q.3 | (a) | Define the following terms with suitable example: 1) Centre of Gravity 2) Centroid 2) March 1975 (1975) | 04 | |
| | (b) | 3) Moment of Inertia 4) Radius of Gyration Determine the Moment of Inertia about both the axis of a channel section, having size as given below: Depth of the section = 500 mm, Width of the flange = 250 mm, Thickness of the flange and web = 20 mm | 06 | |
| | | OR | | |
| | (b) | Determine the Moment of Inertia about both the axis of an 'I' section, having size as given below: Depth of the section = 500 mm , Width of the flange = 250 mm , Thickness of the flange and web = 20 mm | 06 | |
| Q.4 | (a) | Define following with suitable examples and sketches: 1) Equilibrium condition 2) Resultant 3) Moment 4) Couple | 04 | |
| | (b) | Calculate the resultant force using Law of Parallelogram for given condition: $P = 10 \text{kg}$ force is acting at an angle 45° and $Q = 20 \text{kg}$ force is acting at an angle of 120° with respect to positive X-axis. | 06 | |
| | (b) | By Applying the Lami's Theorem, Calculate forces P and Q when weight of 50 kg is suspended acting vertically downward. P force is acting at an angle of 30° and Q force is acting at an angle of 150° with respect to positive X-axis. | 06 | |
| Q.5 | (a) | List out the different supporting system. | 02 | |

08
