## **GUJARAT TECHNOLOGICAL UNIVERSITY**

GUJARAT TECHNOLOGICAL UNIVERSITY			
BE - SEMESTER–IV (OLD) - EXAMINATION – SUMMER 2017 Subject Code: 142101 Date: 01/06/20			17
Subject Name: Transport Phenomena In Materials Processing			
Time: 10:30 AM to 01:00 PMTotal Marks: 70Instructions:1. Attempt all questions.2. Make suitable assumptions wherever necessary.3. Figures to the right indicate full marks.			
Q.1	(a) (b)	Explain different types of fluid flow. Define fluid. State Newton's law of viscosity and classify fluids.	07 07
Q.2	<b>(a)</b>	Derive equation of differential mass balance based on law of conservation of mass.	07
	<b>(b)</b>	What are different modes of heat transfer? Explain them in briefly. OR	07
	<b>(b)</b>	Calculate density, specific weight and weight of one liter of petrol of specific gravity 0.7.	07
Q.3	(a) (b)	Derive equation of viscosity measurement by Stoke's method. State Newton's law of cooling and derive unit for coefficient of convective heat transfer. Differentiate between free and forced convection. <b>OR</b>	07 07
Q.3	(a) (b)	Derive Bernoulli's equation from differential momentum balance equation. In brief discuss black body radiation, Planck's Law and Lambert's law.	07 07
Q.4	(a) (b)	Define Diffusivity. Give Fick's first law and second law. Write note on Kirkindal effect.	07 07
Q.4	(a) (b)	<b>OR</b> Derive Hagen Poiseulle equation for flow through the pipe. Explain different fluid properties with their units.	07 07
Q.5	(a) (b)	Derive equation of differential momentum balance. State Fourier law of heat conduction and derive general equation of heat conduction.	07 07
Q.5	(a)	<b>OR</b> What is mass transfer? Explain following terms: mass density, molar concentration, mass fraction and mole fraction.	07
	<b>(b)</b>	Derive general equation of mass diffusion in stationary media.	07
