GUJARAT TECHNOLOGICAL UNIVERSITY

BE - SEMESTER-V • EXAMINATION - SUMMER 2013

Subject Code: 152105 Date: 23-05-2013 **Subject Name: Industrial Corrosion and Its Prevention** Time: 10.30 am - 01.00 pm **Total Marks: 70 Instructions:** 1. Attempt all questions. 2. Make suitable assumptions wherever necessary. 3. Figures to the right indicate full marks. (a) What is galvanic series? Discuss its importance in corrosion studies. Compare it 07 **Q.1** with emf series. (b) What do you mean by stress corrosion cracking? Mention the causes of stress 07 corrosion. Discuss different methods of prevention from stress corrosion. (a) Define corrosion. Explain mechanism of dry and wet corrosion. 07 Q.2(b) Define and explain exchange current density. How it is related to Faradayos 07 Law? Also mention factors affecting exchange current density. (b) Discuss about concentration polarization. Compare it with activation 07 polarization. (a) Describe the causes and possible remedies of galvanic and crevice corrosion. Q.3 07 With the help of suitable examples explain the effect of corrosion on power equipments. Also mention the method to minimize corrosion in power equipments. Q.3 (a) Define inter granular corrosion and explain its mechanism. Describe methods to 07 control inter granular corrosion in stainless steel. (b) With the help of proper examples, explain that how the inhibitors are helpful in 07 corrosion control. Differentiate between organic and anodic inhibitors. **Q.4** (a) Explain importance of corrosion study. Describe the electro-chemical principle 07 of corrosion. (b) Classify the electrochemical methods of corrosion testing. Discuss the limitations 07 and applications of each of them. OR (a) Showing practical cases explain the high temperature corrosion process. Give 07 **Q.4** the role of Piling-Bedworth ratio in high temperature corrosion study. (b) Compare Tafel extrapolation method with Linear polarization method for the 07 **Q.4** determination of corrosion rate. State the application of the latter method. (a) Explain different methods of application of organic coating and point out their 07 **Q.5** relative advantage and limitations. (b) Classify different practical processes of corrosion control. With the help of 07 suitable examples explain on thermodynamic basis, how the proper material selection is helpful in corrosion control. (a) Compare the operation, mechanism, advantages and disadvantages of hot 07 0.5 dipping process with metal spraying process. (b) Explain cathodic protection method for corrosion control. Differentiate between 07 sacrificial anode cathodic protection method and impressed current cathodic protection method.
