GUJARAT TECHNOLOGICAL UNIVERSITYBE - SEMESTER-VIII • EXAMINATION – SUMMER • 2015

Subject Code: 183204		Code: 183204 Date:05/05/201	Date:05/05/2015	
Ti	•	Name: Wireless and Mobile Communication 0.30AM-01.00PM Total Marks:	70	
		Attempt all questions. Make suitable assumptions wherever necessary.		
Q.1	(a)	Explain the concept of frequency reuse for cellular communication systems and	07	
	(b)	also explain channel assignment strategies for GSM Systems. Explain in details the third generation(3G) wireless networks standards:- 1) 3G W-CDMA (UMTS) 2) 3G cdma2000 3) 3G TD – SCDMA	07	
Q.2	(a)	What is large scale propagation? Explain in detail the free space propagation model.	07	
	(b)	Prove that for a hexagonal symmetry ,the co-channel reuse ratio is given by $Q=\sqrt{(3N)}$.	07	
		OR		
	(b)	For given path loss exponent (a) n=4 and (b) n=3, find the frequency reuse factor and the cluster size that should be used for maximum capacity. The signal to interference ratio of 15 dB is minimum required for satisfactory forward channel performance of a cellular system. There are six co-channel cells in the first tier, and all of them are at the same distance from the mobile. Use suitable approximations.	07	
Q.3	(a)	Briefly Describe Hand-off strategies in cellular system. Compare soft and hard Hand-off.	07	
	(b)	Explain the three basic propagation mechanisms which impact the propagation of signal in a mobile environment.	07	
		OR		
Q.3	(a)	For 7 cell reuse regular cellular structure with equal size hexagonal cells, Determine the Signal-to-Interference (Co-channel) ratio in dB, assuming path loss exponent n=4. For the same system, if, each cell is sectored in 120° sectors, what will be the improvement in Signal-to-interference ratio compared to non-sectored system, in dB?	07	
	(b)	Give complete classification of types of small-scale fading.	07	
Q.4	(a)	Draw the block diagram of the reference architecture of GSM and explain the function of each subsystem.	07	
	(b)	Explain the difference between co-channel interference and adjacent channel interference. Derive the equation for the signal to interference ratio for co-channel interference.	07	
0.4	()	OR	^-	
Q.4	(a)	Explain in detail the IS-95 CDMA forward and reverse channels with block diagram.	07	
	(b)	Compare cell splitting and cell sectoring technique and also explain umbrella cell approach.	07	
Q.5	(a)	Explain in detail the wireless Ad-Hoc network with neat diagram.	07	

	(b)	Write a brief note on OFDM.	07
		OR	
Q.5	(a)	Describe GPRS system architecture.	07
	(b)	Explain in detail the time division multiple access with its key features and comments on the efficiency of TDMA.	07
