GUJARAT TECHNOLOGICAL UNIVERSITY **B.E. - SEMESTER - VIII EXAMINATION - OCTOBER 2012**

Subject code: 180902 Date: 29/10/2012 **Subject Name: Electrical Power Utilization** Time: 02.30pm - 05.00pm **Total Marks: 70 Instructions:** 1. Attempt any five questions. 2. Make suitable assumptions wherever necessary. 3. Figures to the right indicate full marks. **Q.1** (a) State the methods of speed control of three phase induction motor and explain 07 any one method in detail. (b) A motor fitted with a flywheel supplies a load of torque 900 N-m for 2 seconds. During no-load period the flywheel regains its original speed. The motor torque is required to be limited to 450 N-m. Determine the moment of inertia of flywheel. The no-load speed of the motor is 500 r.p.m. and its full load slip is 10% 0.2 (a) Explain operation of an electrical drive in all the four quadrants **07** (b) Explain Ward-Leonard system of speed control with diagram. Also state the 07 advantages & disadvantages of this method OR (b) Derive the following equation determining the radius of gyration of the 07 flywheel used for the purpose of load equalization $J = \frac{Tr}{w_0 - w_r} * \frac{\iota_h}{\log \left(\frac{T_{Lh} - T_{\min}}{T_{Ih} - T_{\min}}\right)}$ 07 Q.3 (a) Discuss 25KV AC traction drive employing transformer with Tap changer **(b)** A train is required to run between two stations 2 km apart at an average speed **07** of 40 kmph. The run is to make to simplified quadrilateral speed-time curve. If the maximum speed is to be limited to 60 kmph, acceleration to 2 kmphps and coasting and braking retardations to 0.15 kmphps and 3 kmphps respectively, determine the duration of acceleration, coasting and braking periods. 0.3 (a) Define average speed ,crest speed and schedule speed and discuss the factors 07 which affect schedule speed of a train (b) A 220 tonne motor coach driven by four motors takes 18 seconds to attain a 07 speed of 40kmph, starting from rest on an ascending gradient of 1 in 75. The gear ratio is 3.2, gear efficiency 90 %, wheel diameter 92 cm, train resistance 45 N/t and rotational inertia 8 % of the dead weight. Find the torque developed by each motor. (a) Discuss the process of electric arc welding. 07 0.4 Explain dielectric heating 07 OR 1

Q.4 Q.4	(a) (b)	Explain typical speed time curves related to traction Explain principle and working of a indirect core type furnace	07 07
Q.5	(a)	Compare incandescent lamp with gas discharge lamp.	07
	(b)	State and explain square law of illumination OR	07
Q.5	(a)	Explain faraday's laws of electrolysis. Also explain current efficiency and energy efficiency	07
	(b)	The illumination of drawing office $30 \text{ m} \times 20 \text{ m}$ is to have a value of 250 lux. If the utilization factor is 0.4 and depreciation factor is 0.85, determine the number and size of incandescent lams required. The efficiency of each lamp is 12 lumens per watt. The lamps are to be fitted at 5 m height.	07
