		GUJARAT TECHNOLOGICAL UNIVERSITY BE - SEMESTER-VI • EXAMINATION – WINTER • 2014	
Sub	ject	Code: 161402 Date: 28-11-2014	
Tin	ne: 02 ruction 1. 2.	Name: Food Rheology and Sensory Evaluation 2:30 pm - 05:00 pm Total Marks: 70 ns: Attempt all questions. Make suitable assumptions wherever necessary. Figures to the right indicate full marks.	
Q.1	(a)	Secant modulus of the stored food between 2 and 6 months is found to be 15°. Same food further stored for three more months. Now, its secant modulus is found to be 40°. Derive inferences from the above information and explain.	
	(b)	<ul> <li>Do as directed.</li> <li>i) Wooden containers should not be used during sensory evaluation. Justify the statement.</li> <li>ii) Time of evaluation in sensory evaluation affects the results. Justify the statement.</li> <li>iii) Define food matrix.</li> <li>iv) State the significance of moisture content in chocolate mass rheology.</li> <li>v) Introduce briefly Triangle Test.</li> <li>vi) Enlist the steps in selection of panel members for descriptive type of test.</li> <li>vii) Differentiate between taste and flavour.</li> </ul>	07
Q.2	(a)	Draw a force deformation curve of fresh and one hour stored NAN at room temperature and explain various characteristics of the same.	07

**(b)** Discuss the steps to carry out sensory evaluation of food product.

**(b)** Explain the design layout of sensory evaluation laboratory.

Differentiate Newtonian and Non Newtonian fluids.

(c) Write a note on human olfactory system and E-nose.

time of relaxation of the specimen. What is its significance?

applied on the bio material.

**(b)** Explain the calibration process of E nose.

**(b)** Introduce briefly: i) True stress

Q.3

Q.3

**Q.4** 

OR

Develop a relationship of change in strain with time when a constant load is

OR

and equilibrium stress are 60 and 50% of the stress at that time. Compute the

ii) Optical Density

**(b)** Explain the flow characteristics of sugar 60° brix sugar syrup at 80 °C and 30°C.

(a) In a Maxwell set of operation it was observed that after 90 minutes decay stress

(a) What are the various methods of color measurement? Discuss any one of them.

		iii) Chord modulus	iv) Time of relaxation			
	<b>(c)</b>	Write short notes on the followings.				
		i) Rheology ii) Beers Law	iii) Time of relaxation	03		
		0	R			
Q.4	(a)	What are the dynamic tests for measuring Rheological properties of the food?				
		In a resonance technique a potato finger 80 mm long and 30 mm in diameter				
		was tested under compression. The recorded resonant frequency obtained was				
		40 Hz. If the mass density of the sample is 2.53 g/cm <sup>3</sup> , calculate the modulus of				
		elasticity of the sample.				
	<b>(b)</b>	With a force deformation curve explain	crunchy and soggy biscuit texture.	04		
	(c)	Differentiate Resilience and Mechanical	hysteresis.	03		
Q.5	(a)	The company developed new flavoured yoghurt. The company wishes to compare their new product with competitor's market product in respect to overall liking. Suggest the most suitable sensory evaluation method and design sensory evaluation card.				
	<b>(b)</b>	Define consumer test. What are guidelin	es to design consumer questionnaire?	04		
	(c)	What are basic requirements to become		03		
		0	R			
Q.5	(a)	Derive casson viscosity equation for mo	lten chocolate mass.	07		
	<b>(b)</b>	Define threshold value. Briefly explain of		04		
	(c)	Differentiate between paired comparisor	• -	03
