 - (iv)Gaining control over somebody by the exercise of will-power
 - (b) Read the following passage and answer the questions given below it:

The air that we breathe today is more polluted than it was before. More factories, more vehicles, greater use of aerosols and sprays, increasing number of refrigerators and air conditioners that release CFC gases, have all contributed toward pollution. When certain chemicals from the smoke and fumes rise up into the air, they mix with the water-vapour in the clouds and make it acidic. When rain or snow falls from such polluted clouds, it is also acidic in nature. This acidic rain falls on the leaves of tree, on the fertile soil and also runs into lakes and rivers. The effects of this rain are disastrous. Trees slowly lose their leaves and die. Fertile soil turns acidic and damages the plants and crops. The fish and animals living in lakes or seas are killed. Even our drinking water can be affected. Many forests all over the world have suffered severe damage on account of acid rain. Before it is too late we must try and put a stop to the millions of vehicles and chimneys pouring harmful fumes into the air. Questions:

- (i) What are the factors contributing to air pollution?
- (ii) How is acid rain formed?
- (iii)How does acid rain cause damage to crops?
- (iv)How is animal life affected by acid rain?
- (v) Give one word for the following:

land where crops grow easily

(c) Summarize the above passage to one third of its length and give a suitable 5 title to it.
