

GUJARAT TECHNOLOGICAL UNIVERSITY**M.E –IIst SEMESTER–EXAMINATION – JULY- 2012****Subject code: 1722501****Date: 06/07/2012****Subject Name: Theory and Design of Textile Machines II****Time: 10:30 am – 13:00 pm****Total Marks: 70****Instructions:**

1. Attempt all questions.
2. Make suitable assumptions wherever necessary.
3. Figures to the right indicate full marks.

- Q.1** Write on various equations for axial and transverse air flows acting on the weft yarn on air jet loom. Also write on equation taking in to consideration complex yarn structure. **14**
- Q.2 (a)** For Straight line-Nominal movement type of picking cam, prove that **07**
- $$(\text{Effective picker stroke}) = \frac{p\omega\pi}{n} = \frac{x_{\max}\pi}{2n}$$
- (with usual notations)
- (b)** Show that for a freely rotating back roller of sensitive back rest, the ratio of warp tension (T) to the applied force (F) is **07**
- $$0.5 \sec^2\alpha \quad \text{when } \theta = 90^\circ$$
- (with usual notations)
- OR**
- (b)** Write briefly on cloth fell position. **07**
- Q.3 (a)** While considering parameters affecting selection of modern looms, discuss effect of Influence of warp length and Flexibility on performance. **07**
- (b)** Compare stress on the weft yarn with reference to projectile, air jet and rapier looms. **07**
- OR**
- Q.3** Give answers of the following. **14**
- (i) What is meant by nominal and actual picker displacement? Calculate force exerted by the picker (for manual running and full speed running) on the shuttle from following data:
Swell pressure on back wall of shuttle: 60 N
Coefficient of friction: 0.23 Mass of shuttle: 1 lbs
Speed of shuttle: 12.5 m/s Distance : 0.2 m
 - (ii) What is the effect of diameter and blowing time of relay nozzle on air consumption on an air jet loom?
 - (iii) For a shuttle loom, calculate maximum permissible loom speed from following data:
Effective reed space: 52'' Average shuttle speed : 12 m/s
Duration of picking: 135 deg Effec. length of shuttle: 30 cm
- Q.4 (a)** Which factors affect the yarn stresses in warping and beaming? Discuss any two in detail. **07**
- (b)** Define different zones of the main nozzle design while considering polytropic air flow. **07**
- OR**
- Q.4 (a)** What is the effect of sizing on weavability parameters of yarn? **07**
- (b)** With reference to EYC, discuss LD Short and LD Long settings in detail. **07**
- Q.5** Taking a hypothetical example, show general features of shed-shape characteristics taking reed displacement angle versus shed angle. Also draw only shed-shape for a loom having no dwell and having shed crossing at 330 and 270 degrees. **14**
- OR**
- Q.5 (a)** Multicoloured warps of a 50s Nm spun yarns are wound on a horizontal section warping drum of 1.5 m diameter, on which inclines are fixed at 15 deg to the axis. Each warp is 3000 m long and 2 m wide and contains 6500 ends. Warp density on drum is 0.6 g/cm³. Determine the depth of yarn on drum when the warp is completed and the corresponding reed traverse per section. **07**
- (b)** Derive the equation for the ratio of warp tension (T₂) to the applied force (F) for the non rotating back rest which gives minimum tension. Draw the graph taking the value of coefficient of friction as 0.22 **07**
