GUJARAT TECHNOLOGICAL UNIVERSITY

M. E. - SEMESTER - I • EXAMINATION - WINTER 2012

Subject code: 714603

Date: 10-01-2013

Total Marks: 70

Subject Name: Advance Operation Research

Time: 02.30 pm – 05.00 pm

Instructions:

- 1. Attempt all questions.
- 2. Make suitable assumptions wherever necessary.
- 3. Figures to the right indicate full marks.

Q.1 (a) Atul Ltd. Company manufactures 2 products P & Q. They can sell 07 unlimited amount of each product of each product & wishes to determine an optimal product mix to maximize profit. Following are the resources: Availability of Raw material X = 1600kg

Availability of Raw material Y = 750kg

Equipment time = 60 Hours;

Labor time = 150 Hours

Bill of material.

Material	Product 'P'	Product 'Q'
Х	1 kg	
Y	0.5 kg	0.5 kg
Equipment time	0.06 Hr	0.04 Hr
Labor time	0.1 Hr	0.15 Hr

Cost & Price information:

Selling price of product 'P' = Rs. 6/unit

Selling price of product 'Q' = Rs. 5/unit

Material cost of X = Rs. 1/kg

Material cost of Y = Rs. 0.5/kg

For 1 unit cost of product 'P':

Equipment cost is Rs. 3 and Labor cost is Rs. 0.4

For 1 unit cost of product 'Q':

Equipment cost is Rs. 2 and Labor cost is Rs. 0.6

Find out the LPP formulation of the problem for maximizing the profit.

(b) Solve the following LPP by simplex method.

07

Max Z = 120 x + 100 ySubject to constraints $2 x + 2.5 y \le 1000$ $3 x + 1.5 y \le 1200$ $1.5 \text{ x} + 4 \text{ y} \le 1200$ $x, y \ge 0$

Q.2 (a) Using a stepping-stone method find out the optimum solution of the 07transportation problem.

		Distribution Centre's							
Sources	D1	D1 D2 D3 D4							
S1	2	3	11	7	6				
S2	1	0	6	1	1				
S3	5	8	15	9	10				
Requirement	7	5	3	2					

- (b) i. State the conditions required for applying simplex method to a LP 02 problem. How we proceed in a case when both of these are not met.
 - ii. The following is a primal problem. Formulate its corresponding dual. Minimize Z = 10x1 + 20x2 + 15x3 + 12x4Subject to constraints, $x1+x2+x3+x4 \geq 100$ $2x1 - x3 + 3x4 \leq 140$ x1 + 4x2 - 2x4 = 50 $x_{1,x_{3,x_{4}} \ge 0, x_{2}}$ unrestricted

OR

(b) Given below is simplex table for maximization type of LPP.

CBV	Basis	bi	X1	X2	S1	S2
4	X2	6	1	1	1	0
0	S2	2	1	0	-1	1
Z=24		Cj	3	4	0	0
		Zj	4	4	4	0
		Cj-Zj	-1	0	-4	0

Give reasons in brief for the following questions:

- i. Is this an optimal solution?
- ii. Are there more than one optimal solution?
- iii. Is this solution degenerate?
- iv. Is S1 is the slack in machine A (hr/week) and S2 in machine B (hr/week), which of these machines is used to the full capacity?
- v. How many units of X1 and X2 are produced? What is the profit?
- vi. What are the shadow prices of the machine hours?

Q.3 (a) Solve the following game.

		В		
		B1	B21	
	A1	2	6	
А	A2	4	5	
-	A3	12	4	

(b) Five lathes are to be allotted to five operators, the following table gives 07 weekly output figures:

		L1	L2	L3	L4	L5
	Р	20	22	27	32	36
tor	Q	19	23	29	34	40
perator	R	23	28	35	39	34
Op	S	21	24	31	37	42
	Т	24	28	31	36	41

Profit per piece is 25%. Find the maximum profit per week.

OR

- Q.3 (a) Explain the following terms in brief.
 - i. Two person-zero-sum game
 - ii. Pure strategy
 - iii. Mixed strategy
 - iv. Saddle point
 - (b) Discuss in brief of significance of Operation Research in modern 07 business management.
- **Q.4** (a) Discuss Integer linear programming. Give an example each of a pure and 07

07

07

05

07

a mixed integer linear programming problem.

- (b) Explain the degeneracy in LP problem and Transportation problem **OR**
- Q.4 (a) For the given cost matrix of an assignment problem having three workers 07 and three jobs, formulate the Integer programming problem.

Warker	Job						
Worker	J1	J2	J3				
W1	4	7	8				
W2	6	5	10				
W3	7	7	9				

(b) What is Extremum Difference Method? Mention the steps of this 07 algorithm.

Q.5 (a) A factory manufacturing tanks for military use has a separate tool room 07 where special maintenance tools are stored. The average time between requirements of tool from tool room is 10 minutes and this follows the poisson's distribution. Average service time of the store keeper is 9 minutes. Determine:

- i. Average queue length
- ii. Average length of non-empty queue
- iii. Average number of mechanics in the system
- iv. Mean waiting time of a mechanic
- v. Average waiting time of mechanic who waits
- (b) An R & D project has following activities:

Activity Precedence Times То Τm Tp 4 8 A ---6 6 8 В А 10 С 8 А 18 10 D В 9 9 9 4 Е С 10 4 F 5 5 A 5 G D,E,F 8 6 10

- i. Draw a PERT network for the activities given in table
- ii. Prepare the schedule of the 7 activities and find out critical path
- iii. If the management puts a deadline of 37 days for the completion of this project, determine the probability of completion Given data: For Z= 3.00, Area = 0.9986

OR

- Q.5 (a) Explain the steps of Maximal flow network analysis algorithm.
 - (b) Find the critical path for the network based on the following table. Also find out free float, independent float and total float for the activities A, G & L.

Activity	Α	В	С	D	Е	F	G	Η	Ι	J	Κ	L
Depends On	-	А	А	B,C	D	Е	B,C	F	F,G	H,I	В	G,K,F
Time	30	7	10	14	10	7	21	7	12	15	30	15
