M. E. - SEMESTER - II • EXAMINATION - WINTER • 2014

Subject code: 1722909 Date: 08-12-2014

Subject Name: Industrial Electronics

Time: 02:30 pm - 05:00 pm Total Marks: 70

Instructions:

- 1. Attempt all questions.
- 2. Make suitable assumptions wherever necessary.
- 3. Figures to the right indicate full marks.
- Q.1 (a) What are the advantages of electric heating? Classify various electric heating methods.
 - (b) Briefly explain any one method of generation of ultrasonic wave. Define: 07
 (i) Attenuation, (ii) Doppler Effect & (iii) Refraction
- Q.2 (a) What are the different types of welding processes? Define: (i) Squeeze 07 Time, (ii) Weld Time & (iii) Hold Time
 - (b) Explain network architecture in detail with neat block diagram. 07

OR

- (b) Briefly explain various network topologies with neat diagrams. 07
- Q.3 (a) Explain SMPS design with fly-back topology.
 (b) Why battery charging is required? What are the different charging modes?
 07
 07
 07
 - (b) Why battery charging is required? What are the different charging modes?

 O'A

 Draw and explain a basic battery charging circuit.

OR

- Q.3 (a) Compare Voltage Source Inverter (VSI) & Current Source Inverter (CSI). Draw only the circuit diagram of a CSI-based high frequency power source for induction heating.
 - (b) Explain the basic principle of operation of SMPS with neat block diagram. 07
- Q.4 (a) Why electrical power is transmitted at high voltage level? Enlist advantages & disadvantages of HVDC transmission over HVAC transmission.
 - (b) Enlist the applications of UPS. What is the meaning of Online UPS & Offline UPS? Explain any one of them with neat block diagram.

OR

- Q.4 (a) What is the fundamental difference between DC drive & AC drive? Briefly explain various types of duty cycles of drives with Torque→Time characteristics.
 - (b) (i) What are the applications of high frequency induction heating?

 Write only the expression of heat generated in the work-piece using high frequency induction heating.
 - (ii) For hardening of an aluminum pulley; required depth of penetration is 1.5mm. Relative permeability & specific resistance of aluminum is $1.0 \text{ \& } 5\times10^{-7}\text{\'a}$ m respectively. Determine the supply frequency.
- Q.5 (a) What are the various systems for traction? What are the advantages of electric traction? Briefly explain electric traction system with basic block diagram.
 - (b) (i) Compare induction heating & dielectric heating. 03
 - (ii) The power required for dielectric heating of a slab of resin of 150cm² in area and 2cm thick is 200W, 30MHz. The material has a

04

05

02

relative permittivity of 5 and power factor of 0.05. Determine the voltage necessary and current flowing through the material.

If the voltage is limited to 600V; what will be the value of the supply frequency to obtain the same amount of heating?

OR

Q.5	(a)	Explain the principle of operation of dielectric heating with neat diagrams.	07
		What are the applications of dielectric heating?	
	(b)	Explain spot welding with neat diagram.	07
