GUJARAT TECHNOLOGICAL UNIVERSITY

ME - SEMESTER- I• EXAMINATION - WINTER 2014

Subject Code: 2712008 Date:09/01/2015 **Subject Name: Advanced Design of Concrete Structures** Time: 02:30 p.m. to 05:00 p.m. **Total Marks: 70 Instructions:** 1. Attempt all questions. 2. Make suitable assumptions wherever necessary. 3. Figures to the right indicate full marks. 4. Use of IS 456, IS 1893, IS 3370, IS 875 and SP 16 are permitted. 5. Use M20 grade of concrete and Fe415 grade of steel, until otherwise stated. 6. Assume unit weight of RCC 25 kN/m³ and masonry 20 kN/m³. **Q.1** The supporting shaft of an Intze water tank is 3 m internal diameter and 250 14 mm thick. Design the reinforcement and verify all the necessary checks in the shaft for combination of working axial load of 6500 kN & working bending moment 1000 kNm for dead load and wind load combination. **Q.2** Explain the serviceability criteria for reinforced concrete structure element for **07** both beam and column. A spherical dome having a span of 18m central rise of 3m and has **07 (b)** thickness of 200mm, floor finish 1.2 kN/m². Design bottom ring beam of 320mm width and supported through out with masonry wall. Assume no live load acting in this system. OR **(b)** Design a conical roof over a 15 m diameter hall with a rise of 3 m. Assume 07 L.L= 2.5 kN/m². The dome is supported on 400 mm wide continuous support on periphery. Q.3 Design an interior FLAT slab panel having c/c dimension of 8.0 x 8.0 m. The 14 flat slab is rested on circular column RCC having diameter 650 mm. Consider that Drops and Column heads are provided in the design. Consider L.L = 5.5kN/m² and F.F=1.0 kN/m². Perform all necessary checks for the safety. Sketch the design also. OR A folded plate floor has all plates making an angle of 45° with horizontal and Q.3 14 casted so that vertical depth of folded plate is 1.5 m. Design reinforcement in plate to carry L.L = 3 kN/m^2 . Assume plate thickness 110 mm and simply supported span of 12 meter. Perform all necessary checks. Sketch the design also. A grid floor has 120 mm thick slab, floor finish =1.2 kN/m², live load 3.8 **Q.4** 14 kN/m² is provided for a hall with overall dimensions of 24 m x 24 m c/c with wall on outer periphery only and 5 interior beams in both direction forming a slab panel of size 4m x 4m. Assume all beams of size 300 x1200mm (including slab thickness). Calculate the bending moment, torsional moment and shear force at a beam junction of hall. Also design reinforcement in central beam of 24 m long. Use IS code method only. OR 0.4 Design a bunker wall of 250 mm thick to resist moment of 33 kNm. Perform all 10

necessary checks.

(b) Explain how the analysis of bunker wall and silo wall are differing.

04

Q.5 A raft foundation of total size 20 m X 20 m is provided for 12 columns with equal distance c/c along both direction and 2.0 m projection of slab on all sides. Assume working load on interior column 7200 kN & on all other columns 2800 kN. Analyze the periphery beam.

OR

Q.5 A column of size 400 mm x 750 mm carrying Pu =3500 kN, Mux= 500 kNm, Muy= 120 kNm is supported by a pile cap 1400 mm thick resting on 4 piles (of 750 mm Diameter each) at 1600 mm c/c. Design the reinforcement in pile cap and calculate maximum pile load.
