Abstract:

In 2010, taking advantage of our newly attained autonomous status, We introduced first cloud computing course. The course was fully developed on cloud platform, using cloud resources and delivered on cloud platform entirely
The purpose of this webinar is to share our experience in discovering and deploying a range of cloud resource into teaching and learning process. We share how we used generally accessible cloud computing resources such blogs, docs and more to build and share learning resources. We also used open source and API options to encourage our students to build projects and applications that turned out to be very useful applications such as Alumni Maps , Cloud Teaching Systems and training and placement web site.
