

GTU INNOVATION COUNCIL

www.gtuinnovationcouncil.ac.in

Every Final Year project of 2014-15 must be innovative and substantially different from the projects of the previous years.

Facility for final year engineering students: They can see all the titles and abstracts of final year projects, completed by students during the previous years.

Guides of every project team: Please ensure that students do not do repetitive projects at all and if some projects are being carried further from old batches then they must add significant value addition to the older attempts in solving the challenges.

GTU students must do substantially unique and different final year projects every year. Hereby we are sharing all the titles and abstracts of the past final year BE projects online in public domain. Kindly refer: <http://gtuelibrary.edu.in/ICSearch.aspx>

From now onwards all projects (BE/DE/ME/M Pharm/MCA) abstracts and titles along with the team, branch and college details will be put in this web link so that originality of the future projects will improve. We wish that no GTU student do projects which have been done before. If some projects are semi finished during the previous years and Guides and students of the same college or of another college wish to carry the projects forward, they can make such attempt. In such a case, please give the reference to the previous project and clearly specify the additions and new ideas, being used for this year's project. We hope such a relay project will lead to some usable products, services or solutions.

From this database students can also know which faculty members is guiding which type of projects both within and outside their colleges and take their help while doing their final year projects.
