In Pursuit of Excellence

IEEE AP/MTT Joint Chapter, Gujarat Section and Antenna Test & Measurement Society (ATMS) proudly announces a Public Lecture on

“Space Exploration Driven by “Curiosity”

By

Dr Goutam Chattopadhyay

Jet Propulsion Laboratory, NASA, USA

The rover Curiosity touched down on the surface of Mars on August 5, 2012. It was built to conduct an investigation of modern and ancient habitable environments. This broad and diverse payload, coupled with a rich field site at Gale Crater, already has established the importance of water in shaping the geology and geochemistry around the landing area, addressed long-standing questions regarding Mars' atmospheric composition and evolution, and made serendipitous discoveries not anticipated from orbital data studied prior to landing.

*You are cordially invited to attend this lecture on **30th July, 2014 at AMA, Vastrapur at 05:30 PM.** Further you are requested to take your seats well in advance to avoid disappointment.*

With warm regards,

*R. K. Malaviya,
Secretary, ATMS &
President, Rotary Club -
Ahmedabad Greater.*

*Rajeev Jyoti
Chair, IEEE AP/MTT Joint Chapter
Gujarat Section
Ahmedabad.*
