21st March-2015

With the guidance of our honorable Vice Chancellor Dr. Akshai Aggrawal and our research advisor, Dr. P. K. Srivastava, the Open Source Technologies Club of Gujarat Technological University (GTU OSTC) and GTU PG SCHOOL organized a workshop on LaTeX on 21st March-2015. LaTeX is a document preparation system and markup language. The Resource Persons for the workshop were Prof. Vijay Ukani from Nirma University and Prof. Ishaq Sheikh from GCET, Vallabh Vidyanagar. GCET is affiliated with GTU.

The workshop was initiated by welcoming the experts. Dr. P. K. Srivastava delivered the keynote address and explained the significance of LATEX. He also give some advantages of LATEX in preparation of technical and scientific documentation.

The first session on LaTeX was taken by Prof. Vijay Ukani. The topics during this session were: 'What is TEX?', 'What is LaTeX?', 'Why LaTeX?' and 'Limitations of LaTeX'. He also explained basics of LaTeX including basic commands, document structure, running and viewing LaTeX.

What is LATEX?

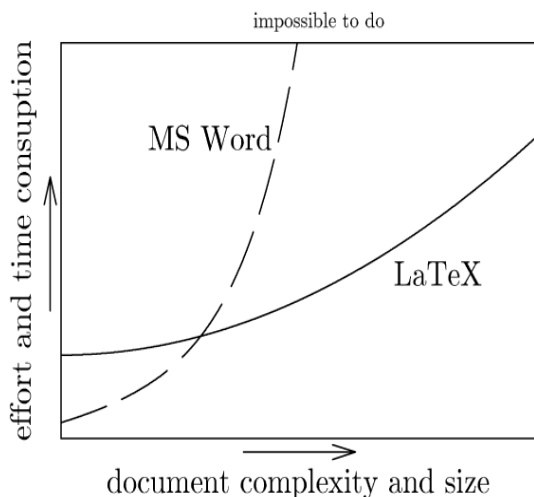

- Pronounced as Lah-tek, or Lay-tek
- A typesetting program, not a word-processor
- Macros of TeX (Donald E. Knuth)
- Designed for producing beautiful Books, Thesis, Papers, Articles...
- De facto standard for writing academic papers

Limitations of LATEX.

- LaTeX is not WYSIWYG you have to compile your files before you can see the changes. Rather it is WYMIWYG (What You Mean is What You Get)
- If you are trying to produce a document for which there is no pre-defined layout, it requires a fair bit of knowledge to design a new layout
- You cannot easily exchange LaTeX files with colleagues who are unfamiliar with it
- Inflexible formatting (difficult to change position of figures); Requires compilation

He compared Microsoft Word and LaTeX. Then he explained the LaTeX Compilers & Editor.

Expert Prof. Vijay Ukani Delivering his lecture.

Prof. Vijay Ukani conducted hands-on learning exercises on controlling appearance of LaTeX like numbering list, bullet point list, description list, basic text formatting (fonts, symbols, quotations, footnotes). He explained paragraphs indentation & new lines and changing font style & size. He also explained the following:

- Including figures
- Adding Tables
- Adding basic math building blocks & equations

After completion of the hands-on session, he explained common mistakes done by LaTeX users.

The second session was by Prof. Ishaq Sheikh. He explained Beamer for LaTeX, where Beamer is a LaTeX class for creating presentations that are held using a projector, but it can also be used to create transparency slides. A Beamer presentation is created like any other LaTeX document: It has a preamble and a body, the body contains `\sections` and `\subsections`, the different slides (called frames in Beamer) are put in environments, they are structured using `itemize` and `enumerate`

environments, and so on.

Then he explained how to use beamer and the important features of beamer as follows:

- You can use Beamer both with `pdflatex` and `latex+dvips`.
- You can easily create overlays and dynamic effects.
- Themes allow you to change the appearance of your presentation.
- The themes are designed to be usable in practice, they are not just for show. You will not find such nonsense as a green body text on a picture of a green meadow.
- The layout, the colors, and the fonts used in a presentation can easily be changed globally, but you still also have control over the most minute detail.
- A special style file allows you to use the LaTeX source of a presentation directly in other LaTeX classes like `article` or `book`. This makes it easy to create presentations out of lecture notes or lecture notes out of presentations.
- The final output is typically a PDF file. Viewer applications for this format exist for virtually every platform.

The workshop ended by presenting a vote of thanks to experts, participants and students of the GTU PG School for their valuable support.
