

GUJARAT TECHNOLOGICAL UNIVERSITY

M.E

Communication Systems Engineering

Syllabus of Post Graduate Course (Master of Engineering) in Communication Systems Engineering

Core courses

Statistical Signal Analysis

Review of probability, Sample space, Algebra and random variable, Distribution and densities, Characteristics functions and moment generating functions, Transformation (function) of random variables; Conditional expectation; Sequences of random variables: convergence of sequences of random variables.

Statistical Independence, Uncorrelation of Random Variables, Joint and Marginal Densities Function of random variables, Stochastic processes: wide sense stationary processes, orthogonal increment processes, Wiener process, Ergodicity.

Mean square continuity, Stochastic Calculus: mean square derivative and mean square integral of stochastic processes.

Stochastic systems: response of linear dynamic systems to stochastic inputs correlation function; power spectral density function; introduction to linear least square estimation.

Least square and mean square error.

Reference Books:

Alberto leon Gracia, Probability and Random Processes for Electrical Engineer, 2nd Ed PE India

A.Papoulis, Probability Random Variables and stochastic Processes, 2nd Ed Mc Graw Hill

A. Larson and B.O. Schubert, Stochastic Processes, Vol.I and II, Holden-Day

W.Gardener, Stochastic Processes, McGraw Hill.

S. Haykin, Adaptive filter theory, prentice Hall.

B.P.Lathi, Modern Analogue and Digital communication, Oxford uni. Press.

Information Theory and Coding

Basic concept of coding, Unique decodable codes and instantaneous decodable codes (IDC) Construction of IDC, Kraft's inequality and McMillan's theorem. Huffman and Shannon-Fano code.

Entropy, Entropy of sources and their extension. Lossless image compression.

Arithmetic Coding

Basic of channel coding and Hamming distances, channel capacity and Shannon's fundamental theorem

Linear block codes ; Systematic linear codes and optimum decoding for the binary symmetric channel; Generator and parity Check Matrices Syndrome decoding on symmetric channels; Hamming codes, cyclic code, Burst errors, BCH Code, Reed-Solomon Codes.

Convolution codes; Wozencraft's sequential decoding algorithm, Fano's algorithm and other sequential decoding algorithms Viterbi decoding algorithm, BCH code

Cryptography

Reference Books:

Jiri Adamek, Foundation of coding, John Wiley and sons.

A.J. Viterbi and J.K. Omura, Principles of Digital Communication and Coding, McGraw Hill

Bernard Sklar, Digital communication fundamental and Application, PE India.

N. Abramson, Information and Coding, McGraw Hill

M. Mansurpur, Introduction to Information Theory, McGraw Hill

R.B. Ash, Information Theory, Prentice Hall

Shu Lin and S.J. Costello Jr., Error Control Coding, Prentice Hall

ASIC Design

ASIC Design flow, Design Methodologies, Introduction to Hardware Description Language (VHDL): Structural, Behavioral, Data flow modeling, Concurrent and sequential VHDL, RAM and ROM, Test Benches, Finite State Machines, RTL Synthesis Test Methodology

Programmable Logic Design, Basics of Programmable logic devices, CPLD Architecture and its building blocks, FPGA Architectures and its building blocks, Technology mapping for FPGAs

Design implementation using CPLD and FPGA, Floor planning and Placement

Reference Books:

D.Perry, VHDL, 2nd Ed., McGraw Hill International.

J. Bhasker, VHDL, Primer, Pearson Education Asia, Low Price Edition

Charles H Roth, Jr., Digital Systems Design Using VHDL, Brooks/Cole Thompson Learning

Z. Navabi, VHDL: Analysis and Modeling of Digital Systems, McGraw Hill International Editions

Michael John Sebastian Smith, Application Specific Integrated Circuits, Pearson Education Asia.

Xilinx and Altera Application Notes on the architecture of FPGAs and CPLDs.

Telecom Switching System, Networks and Network Management.

Introduction to communication networks and services, Basics of telephony- Store Program control, centralized and distributed control.

Space Division switching Basic time division switching, Time multiplexed switches, Combination Switching, Fundamental of traffic engineering,; Lee and Jacobus blocking analysis.

ISO-OSI reference model, TCP-IP protocol suit, ATM networks, LANs and MAC protocols, Packet Switching Networks.

Introduction to network management, SNMPv1, SNMPv2, SNMPv3,

Network monitoring tools and systems, Network monitoring applications.

Remote Monitoring (RMON), ATM network management, web-based management.

Reference Books:

T Viswanathan , Telecommunication switching systems and networks. PHI

Johan C. Bellamy ,Digital Telephony , 3rd edition, John Wiley and Sons

Mani Subramanian, Network Management: Principal and Practice Addison-wesley.

Stalling, W. SNMP, SNMPv2, SNMPv3, and RMON 1 and 2 Reading MA: Addison-Wesley.

Advanced Digital Communication

Review of probability and Stochastic Processes.

Characterization of Communication Signal and System. Geometric Representation of Signals and its use in communication.

Optimum receiver for Additive White Gaussian Noise, BER calculation.

Carrier and symbol synchronization, signal design for Band Limited Channels.

Communication through Band limited Channel, concept of parallel transmission, Multi channel and multi carrier CDMA system, fading multi-path channel, OFDM, Future trends.

Reference Books:

Proakis J.J., D Wozencraft J.M. and Jacobs I.M., Principles of Communication Engineering, John Wiley.

Carison A., Communication System, 3rd., McGraw Hill.

Van Trees H.L., Detection Estimation and Modulation Theory, Vol. 1., Wiley.

Blahut R.F., Digital transmission of Information, Addison Wesley.

Benedetto S., Biglieri E. and Castellari V., Digital Transmission Theory, Prentice Hall.

Seminar

Research topic has been selected by student for area of interest and detailed report should be submitted to college at end of semester.

Wireless and Mobile Communication

Introduction to mobile communication. Past, present and Future wireless– Mobile technology. Introduction to GSM and CDMA Technology. GSM system architecture overview, call management and system operation. CDMA based cellular system.

Cellular radio system design, frequency assignment, frequency reuse channels, Concept of cell splitting. Handover in cellular systems. Handoff algorithms.

Radio wave propagation, propagation models, reflection, scattering, fading, shadowing multi-path effects Path loss over hilly and flat terrain, Power prediction over flat and hilly terrain. RF design, received signal phase and envelope characteristic. Simulation of wireless channel.

Bandwidth and power spectral density, pulse shaping techniques, BPSK, QPSK, QPPSK, MSK, GMSK

Reference Books:

William C. Y. Lee, Mobile Communication Engineering, Theory and Applications, McGraw Hill.

Raj Pandya, Mobile and Personal Communication Systems and Services, PHI

Theodore S. Rappaport, Wireless Communications Principles and Practice, PE India.

WCY Lee, Mobile Cellular Telecommunications, McGraw Hill International Edition.

Raymond Steele, Mobile Radio Communications, IEEE Press, New York.

AJ Viterbi, CDMA: Principles of Spread Spectrum Communications, Addison Wesley, New York.

VK Grag, and JE Wilkes, Wireless and Personal Communication Systems, Prentice Hall.

Dissertation

The aim of this course is to impart knowledge about building/ Making project in steps like technical considerations, performance specifications , analysis of specification requirements, technical approach; system design considerations, choice of process, hierarchy of design details, preliminary block diagrams, study of the design from the point of view of compatibility cost comparison, commonality, cost affectivity, The next step shall be the implementation of the project, performance evaluation and final submission.

Dissertation:

A student registered in this course must take a topic in an area of professional interest drawn from the on the job work requirement which is simultaneously of direct relevance to the degree pursued by the student as well as to the employing/collaborating organization of the student and submit a comprehensive report at the end of the semester working under the overall supervision and guidance of a professional expert/ teacher supervisor, who will be deemed as the supervisor for evaluation of all components of the dissertation. Normally the Mentor of the student would be the Dissertation supervisor and in case Mentor is not approved as the supervisor, `Mentor may plan the role of additional supervisor. Preferably the dissertation should contain hardware implementation related to the thesis work.

Elective Courses

Fiber Optic Communication

Introduction, propagation of light, propagation of light in a cylindrical dielectric rod, Ray model, wave model. Different types of optical fibers, Modal Analysis of a step index fiber.

Optical channel Modeling – Signal degradation on optical fiber due to dispersion and attenuation. Fabrication of fibers measurement techniques like OTDR

Optical sources – LEDs and Lasers, Photo-detectors – Pin-detectors, detector responsively noise, Optical link design – BER calculation, quantum limit, power panelities.

Optical switches – coupled mode analysis of directional couplers, electro-optic switches.

Nonlinear effect in fiber optic links. Concept of self-phase modulation, group velocity dispersion and soliton based communication. Optical amplifiers – EDFA, Raman amplifier and WDM systems.

Reference Books:

J. Keiser, Fiber Optic Communication, McGraw-Hill

J. Gower, Optical Communication systems, Prentice Hall, India.

G. Agrawal, Nonlinear fiber optics, Academic Press.

G. Agrawal, Fiber optic Communication systems, John Wiley and sons.

J. Senior, Optical Fiber Communication.

Image Processing (Interdisciplinary Elective – 1)

Introduction – Image as a 2D data, Image representation – Gray scale and Color images, image sampling and quantization.

Frequency domain processing – Two dimensional orthogonal transforms: DFT, FFT, WHT. Haar transform, KLT, DCT.

Image enhancement – filters in spatial and frequency domains, histogram-based processing, Homomorphic filtering.

Edge detection – non parametric and model based approaches, LOG filters, localization problem

Image restoration – PSF, circulant and block circulant matrices, deconvolution, restoration using inverse filtering. Wiener filtering and maximum entropy- based methods.

Mathematical morphology – binary morphology, dilation, erosion, opening and closing duality relations, gray scale morphology, application such as hit-and-miss transform thinning and shape decomposition.

Image communication – JPED, JPEG 2000, MPEGs and H.26x standards packet video, error concealment.

Image texture analysis co-occurrence matrix, measures of textures, statistical models for textures, principal component analysis.

Misc. topic such as – Hough Transform, boundary detection, chain coding, and segmentation, thresholding methods.

Reference Books:

R. Gonzalez and E. Woods, Digital Image Processing, PHI

A. K. Jain, Fundamentals of digital image processing, Prentice Hall of India.

W. K. Pratt, Digital image processing, Prentice Hall

A. Rosenfold and A. C. Kak, Digital image processing, Vol 1 & 2, Prentice Hall.

Speech Processing

Introduction – Speech production and acoustic phonetics, speech perception.

Speech analysis: time and frequency domain techniques for pitch and formant estimation, cepstral and LPC analysis.

Speech Enhancement: Microform Codes, Source coders, and Hybrid coders.

Speech Enhancement; Microphone Array processing, Noise Suppression, and Echo Canceller.

Speech Recognition: Basic pattern recognition, preprocessing, Parametric representation, Evaluating the similarity of speech pattern, Accommodating both spectral and temporal variability, Network for speech recognition, Language model, Artificial neural networks. Summary of current speech recognition design.

Speech synthesis: articulatory, formant, and LPC synthesis, voice response and text-to-speech systems.

Applications: data compression, vocoders, speech enhancement, speech recognition speaker recognition, aids for the speech and hearing impairments.

Reference Books:

D O'shaughnessy, Speech Communication: Human and Machine, Addison Wesley.

L R Rabiner and R W Schafer, Digital Processing of Speech Signals, Prentice Hall

J Flanagan, Speech Analysis, Synthesis, and Perception, Springer Verlag.

W. Rappaport, Wireless Communication.

Biomedical Signal Processing

Introduction to Human physiological system, Types of Biomedical signals: ECG, EEG, EMG, EOG, ERG etc.

Introduction to short term Fourier transform (STFT), Design of filters using Hanning window, Hamming window, Kaiser window, Haar window

Introduction to Electrocardiograph and ECG signals, Types of interferences in ECG signals, ECG signal analysis and noise removal, Detection of ECG abnormalities, ANN-based ECG analysis system

Introduction to Electroencephalograph and EEG signals, EEG signal analysis, Kurtosis coefficients, Independent component analysis (ICA), Principle component analysis (PCA)

Autoregressive (AR) Model, Fast Fourier Transform (FFT) and Inverse Fast Fourier Transform (IFFT), Data Compression methods: Arithmetic coding, Huffman coding, LZW coding, Bit-plane coding

Introduction to Medical image compression: Discrete cosine transform (DCT), Walsh-Hadamard Transform (WHT), Wavelet transform (WT), JPEG, JPEG 2000, SPIHT coding

Reference Books:

Willis Tompkins, Biomedical Signal Processing, PHI

A.V. Oppenheim and Schafer, Discrete Time Signal Processing, Prentice Hall

John G. Proakis and D.G. Manolakis, Digital Signal Processing: Principle, Algorithms and Applications, Prentice Hall

Embedded System Design

Embedded Micro controller Cores, Embedded Memories, SRAM, DRAM Controllers.

Embedded System Design Aspects:

Interfacing between analog and digital sections, signal conditioning, Interfacing with external systems, User interfacing.

Software aspects of Embedded Systems:

Real time programming languages & operating systems for Embedded Systems, Embedded programming in C/C++, Scheduler, Multitasking, Threading concepts and implementation,

Serial Communication Interface: UART, SCI applications, Modern Serial Interface Standards, Modems, SPI, I²C, USB, Introduction to JTAG Port

Case study of Embedded Applications .

Reference Books:

J. W. Valvo, Embedded Micro computer system, Brooks/Cole.

K. J. Ayala, The 8051 Microcontroller, Pernam Intl.

Jack Ganssle. The art of designing Embedded Systems.

Daniel W. Lewis, Fundamentals of Embedded Software

Introduction to Artificial Intelligence (Interdisciplinary Elective – 2)

Introduction, problem characteristics, issues in design of search algorithms.

Searching: Uninformed search techniques, alternative deepening. Heuristics search techniques, Constraint Satisfaction; Means Ends Analysis; Alternative search techniques, Evolutionary search techniques-working of Genetic Algorithm and simulated annealing

Game-playing: Single player game, Two player game, The Minmax procedure, Minmax Procedure with alpha-beta cutoffs, Quiescent search, search efficiency

Knowledge representation: The propositional Calculus – resolution in propositional calculus, entailment, PSAT problem, The Predicate calculus – resolution in predicate calculus, quantification, unification, horn clauses.

Expert System: introduction, knowledge representation in ES, reasoning with uncertain information, Bayes network, D-separation, probabilistic interfacing, inexact reasoning, representing common sense knowledge, non-monotonic and monotonic reasoning, forward and backward chaining.

Introduction to ANN, feed forward and feedback networks, perceptions linearly separable and non-separable problems, supervised and unsupervised learning, back propagation algorithm, introduction to fuzzy logic and fuzzy sets, membership function, defuzzification methods, fuzzy arithmetic.

Reference Books:

Nils J Nilson, Artificial intelligence: A new synthesis, Morgan Kaufmann Publishers.

E Rich and K Knight, Artificial intelligence, Tata MacGraw Hill Publishing

Giarratano and Tiley, Expert Systems – Principal and programming, Thomson Publishing.

RF AND MICROWAVE ENGINEERING

INTRODUCTION

Conceptual understanding of wave propagation in the guided media such as transmission lines, rectangular and circular waveguides; Various characteristics and parameters such as wave velocity, dispersion, mismatch effects; voltage - current - field distributions.

Poynting Power / Vectors Theorem and Uniqueness Theorems, Maxwell time varying equations, Smith chart applications to RF and Microwave Engineering,

RF and MICROWAVE ANALYSIS

Impedance and Admittance Matrix, Hybrid matrix, Scattering matrix, ABCD Matrix, Discontinuities and Modal analysis, Signal flow graph representation, Various excitation and coupling methods to the waveguides.

MICROWAVE COMPONENTS

Understanding the in-depth principle, working, analysis and design of ferromagnetic:

Passive components such as microwave resonators, power dividers and couplers, filters and impedance transformers – Chebyshev, Binomial and Tapered.

Ferromagnetic components such as isolators, phase shifters, circulators.

MICROWAVE DEVICES AND CIRCUITS

Conceptual understanding the principle, working and applications of microwave circuits and active devices such as: Mixers, Detectors, Microwave Integrated Circuits, Monolithic Microwave Integrated Circuits, Microwave Amplifiers, Oscillators and Synthesizers.

Reference Books:

Pozar D M, Microwave Engineering, Wiley

Mishra Ravindra, RF and Microwave Communication, Wiley

Gupta K C, Microwaves, New Age International Publ

Collin R E, Foundations for Microwave Engineering, McGrawHill International

M. Golio & J. Golio, RF and microwave Technologies: Vol I,II,III,CRC Press

Digital VLSI Design

Introduction to VLSI design, MOS Physics, Structure and operation of MOSFETs, MOSFET Modelling, MOSFET Scaling, MOSFET Capacitances.

Basics of Different fabrication Processes of MOS Integrated circuits, Processing Steps, Design Rules, Integrated Circuits Layout.

Design and Analysis of different MOS Inverters, Design and Analysis of MOS combinational logic circuits, CMOS logic structures: Static and Dynamic Logic, Design and Analysis of Sequential Circuits.

Reference Books:

Sung-Mo-Kanf and Yusuf Leblebici, CMOS Digital Integrated Circuits, Tata McGraw Hill

N.Weste and K. Eshraghian, Principles of CMOS VLSI Design, Addison Wesley.

L.Glaser and D. Dobberpuhl, The Design and Analysis of VLSI Circuits, Addison Wesley.

C. Mead and L. Conway, Introduction to VLSI Systems, Addison Wesley.

J.P. Uyemura, Circuit Design for CMOS BLSI, Kluwer

R.A.Geiger, P.E.Allen, N.R.Strader, VLSI Design Techniques for Analog and Digital Circuits, McGraw Hill

RF Microelectronics

Introduction to RF and Wireless Technology: Complexity, design and applications. Choice of Technology. Basic concepts in RF Design: Nonlinearly and Time Variance, inter symbol interference, random processes and Noise.

BJT and MOSFET behavior at RF frequencies Modeling of the transistors and SPICE models.

Noise performance and limitation of devices, Integrated Parasitic elements at high frequencies and their monolithic implementation.

Basic blocks in RF systems and their VLSI implementation : Low noise Amplifier design in various technologies, Design of Mixers at GHz frequency range, Various Mixers: their working and implementation, Oscillators : Basic topologies VCO and definition of phase noise.

Noise-Power trade-off. Resonator less VCO design, Quadrature and single sideband generators, Radio Frequency Synthesizers: PLLS, Various RF synthesizer architectures and frequency dividers, Power Amplifiers design, Liberalization techniques, Design issues in integrated RF filters.

Reference Books:

B.Razavi, RF Microelectronics, Prentice-Hall PTR.

T.H.Lee, The Design of CMOS Radio Frequency Integrated Circuits, Cambridge University Press

R.Jacob Baker,H.W.Li and D.E.Boyce, CMOS Circuit Design, Lay out and Simulation,Prentice-Hall of India

Y.P.Tsividis, Mixed Analog and Digital VLSI Devices and Technology, McGraw Hill

B.Razavi, Design of Analog CMOS Integrated Circuits, Tata Mc-Graw Hill.

Microelectronics chip fabrication

Environment for VLSI Technology: Clean room and safety requirements. Wafer cleaning processes and wet chemical etching techniques.

Impurity incorporation: Solid State diffusion modeling and technology; Ion Implantation modeling, technology and damage annealing; characterization of Impurity profiles.

Oxidation: Kinetics of Silicon dioxide growth both for thick, thin and ultra-thin films. Oxidation technologies in VLSI and ULSI; Characterization of oxide films; High k and low k dielectrics for ULSI.

Lithography: Photolithography, E-beam lithography and newer lithography techniques for VLSI/ULSI; Mask generation.

Chemical Vapour Deposition techniques: CVD techniques for deposition of poly-silicon, silicon dioxide, silicon nitride and metal films; Epi-taxial growth of silicon; modeling and technology, In-process measurements.

Metal film deposition: Evaporation and sputtering techniques. Failure mechanisms in metal interconnects; Multi-level metallization schemes.

Plasma and Rapid Thermal Processing: PECVD, Plasma etching and RIE techniques; RTP techniques for annealing, growth and deposition of various films for use in ULSI.

Carrier lifetime measurement techniques, Process integration for NMOS, CMOS and Bipolar circuits; Advanced MOS technologies.

Reference Books:

S.K. Ghandhi, VLSI Fabrication Principles, John Wiley Inc., New York, 1983.

S.M. Sze (Ed), VLSI Technology, 2nd Edition, McGraw Hill, 1988.

Satellite communication

Introduction, Kepler's First, second and third Law, Definitions of Terms for Earth-orbiting Satellites, Orbital Elements, Apogee and Perigee Heights, Orbital Perturbations, Effects of a Non spherical Earth, Atmospheric Drag, Inclined Orbits, Calendars, Universal Time, Julian Dates, Sidereal Time, The Orbital Plane,

Antenna Look Angels, The Polar Mount Antenna, Limits of Visibility, Near Geostationary Orbits, Earth Eclipse of Satellite, Sun Transit Outage, Launching Orbits, Attitude Control, Spinning Satellite Stabilization, Momentum Wheel Stabilization, Station Keeping, Thermal Control, TT&C Subsystem, Transponders, Demultiplexer Power Amplifier, Antenna Subsystem.

Receive-Only Home TV Systems, Master Antenna TV System Community Antenna TV System, Transmit-Receive Earth Stations, Equivalent Isotropic Radiated Power, Transmission Losses, Free-Space Transmission, Feeder Losses, Antenna Misalignment Losses, Fixed Atmospheric and Ionospheric Losses, Link Power Budget Equation, Overall System Noise Temperature, Carrier-to-Noise Ratio, Input Back Off, Combined C/N .

Pre assigned FDMA, Demand-Assigned FDMA, SPADE System. Bandwidth-limited a Power-limited TWT amplifier operation, FDMA downlink analysis. TDMA : Reference Burst; Preamble and Postamble, Carrier recovery, Network synchronization, unique word detection, On-board signal Processing, Satellite switched TDMA.

Introduction, Orbital Spacings, Power Rating and Number of Transponders, Frequencies and Polarization, Transponder Capacity, Bit Rates for Digital Television

Reference Books:

Dennis Roddy, Satellite Communications, McGraw-Hill Publication
Third edition 2001.

Wilbur L. Pritchards Henri G.Suyder Hond Robert A.Nelson,
Satellite Comm. Systems Engg., Pearson Edu.Ltd., 2nd edition 2003.

Richharia : Satellite Communication Systems (Design Principles Macmillan Press Ltd.
Second Edition 2003.

ANTENNA ENGINEERING AND DESIGN

INTRODUCTION TO ANTENNAS

Review the fundamental theory of antennas: Reciprocity theorem, Antenna equivalent circuit, Classification of antennas, Brief understanding of special types of Antennas.

Gain a thorough understanding of the important concepts: Radiation Impedance, Radiation Pattern, Antenna Impedance, Bandwidth, Directivity, Gain, Antenna efficiency, Radiation Efficiency, Antenna Polarization, Antenna Apertures, Antenna temperature, near-field and far-field concepts, and radiation mechanism.

ANTENNA SYNTHESIS, ANALYSIS and OPTIMIZATION TECHNIQUES

Introduction to various methods of antenna synthesis such as Schelkunoff Polynomial, Fourier transform, Woodward Lawson.

Introduction to antenna analysis methods: Integral equation method, Moment method, Finite Difference Time Domain methods; Applications of these methods to the practical antennas such as dipole, loop, helical, microstrip patch, and PIFA.

Various optimization techniques (OT) such as Genetic algorithm, Artificial Intelligence, Fuzzy logic. Comparative analysis of the OT's for particular application and antenna type.

ANTENNA DESIGN

Various impedance matching techniques such as Quarter wavelength transformer, T-match, Gamma Match, Omega match, Baluns and Transformers.

Analytical comparative study of wire type and aperture type, narrow band and wide band, element and antenna array antennas.

Designing an antenna with a set of given specifications using standard software.

Material selection for antenna to be designed, understanding the specifications – errors responses – corrections methods.

Concepts of antenna coupling, coupling methods, interferences and effects on performance of the antenna system.

SPECIAL TOPICS FOR ANTENNA DESIGN and MEASUREMENT

Techniques to miniaturize an antenna for wireless LAN and Blue tooth applications, Wide-band and multi-band antennas, Mobile antennas and antenna diversity, Reconfigurable antennas, Practical consideration in designing antennas for wireless communications (such as the interaction between mobile antenna and human body).

Measurement of various antenna parameters necessarily needed for practical antennas.

Understanding the working and design of anechoic chamber, practical difficulties, types and applications.

Reference Books:

Balanis C A, Antenna Theory: design and applications, Wiley

Hohnson R C and H Jasik, Antenna Engineering Handbooks, McGraw Hill

Sadiku N O Mathew, Elements of Electromagnetics, Oxford Univ Press

Harrington R F, Time harmonic Electromagnetic Fields, McGraw Hill

Computer Aided Design for VLSI

Matrices: Linear dependence of vectors, solution of linear equations, bases of vector spaces, orthogonality, complementary orthogonal spaces and solution spaces of linear equations.

Graphs: representation of graphs using matrices; Paths, connectedness; circuits, cut-sets, trees; Fundamental circuit and cut-set matrices; Voltage and current spaces of a directed graph and their complementary orthogonality.

Algorithms and data structures: efficient representation of graphs; Elementary graph algorithms involving bfs and dfs trees, such as finding connected and 2- connected components of a graph, the minimum spanning tree, shortest path between a pair of vertices in a graph; Data structures such as stacks, linked lists and queues, binary trees and heaps. Time and space complexity of algorithms.

Reference Books:

K. Hoffman and R.E. Kunze, Linear Algebra, Prentice Hall (India), 1986

N.Balabanian and T.A. Bickart, Linear Network Theory : Analysis, Properties, Design and Synthesis, Matrix Publishers, Inc., 1981.

T.Cormen, C.Leiserson and R.A.Rivest, Algorithms, MIT Press and McGraw-Hill, 1990.

Digital Signal Processing and Applications

Discrete Time Signals: Sequences representation of signals on orthogonal basis: Sampling and Reconstruction of signals;

Discrete systems: attributes, Z-Transform, Analysis of LSI systems, Frequency Analysis, Inverse Systems, Discrete Fourier Transform (DTF), Fast Fourier Transform algorithm, Implementation of Discrete Time Systems.

Design of FIR Digital filters; Window Method, Park-McClellan's method.

Design of IIR Digital Filters: Butterworth, Chebyshev and Elliptic Approximations; Lowpass, Band pass, Bandstop and High Pass Filters.

Effect of finite register length in FIR filter design

Parametric and non-parametric spectral estimation, Introduction to multirate signal processing. Application of DSP to Speech and radar signal processing.

Overview of DSP Processors, Harvard modified Harvard Architecture, MultiBus architecture, Floating point Vs Fix point dsp processor. Case Study.

Reference Books:

A.V. Oppenheim and Schafer, Discrete Time Signal Processing, Prentice Hall

John G.Proakis and D.G. Manolakis, Digital Signal Processing: Principle, Algorithms and Applications, Prentice Hall

L.R. Rabiner and B. Gold, Theory and Application of Digital Signal Processing, Prentice Hall

D.J. DeFatta, J.G.Lucas and W.S. Hodgkiss, Digital Signal Processing, J Wiley and Sons, Singapore.

Neuro Computing and Applications

Biological and Artificial Neuron, Perceptron model, Adaline model, Different types of Activation functions.

Learning Techniques: Supervised and Unsupervised learning.

Multilayered feed forward Networks, Back propagation algorithms and its improvements.

Applications of back propagation algorithm to statistical pattern recognition, Classification and regression problems, Advantages of Neural Networks over statistical classification techniques,

Recurrent networks, Radial Basis Function Networks as an interpolation model, Time delay Neural Networks for forecasting problems, probabilistic Neural Networks,

Kohonen's Self Organizing map, Self organizing map with quadratic functions and its applications medical imaging, Adaptive Resonance, Theory Model, Extensive sessions in MATLAB for solving statistical pattern recognition, classification, regression, and prediction problems using different kinds of Neural Network Models.

Reference Books:

Neuro-Fuzzy and Soft Computing Lee Jng, Chuentaisun, E G Maizutani, PE India.

Machine Learning

Introduction to Machine Learning, and Statistical Pattern Recognition.

Supervised learning: generative/discriminative learning, parametric/non-parametric learning, neural networks, support vector machines

Unsupervised learning: Clustering, Dimensionality reduction, Kernel methods, learning theory (bias/variance tradeoffs; VC theory; large margins);

Reinforcement learning: Dynamic programming, Adaptive control.

Recent applications of machine learning: Robotic control, Data mining, Autonomous navigation, Bioinformatics, Speech recognition, and Text and web data processing.

Reference Books:

Christopher Bishop, Pattern Recognition and Machine Learning. Springer, 2006.

Richard Duda, Peter Hart and David Stork, Pattern Classification, 2nd ed. John Wiley & Sons, 2001.

Tom Mitchell, Machine Learning. McGraw-Hill, 1997.

Richard Sutton and Andrew Barto, Reinforcement Learning: An introduction. MIT Press, 1998

Robotics and Intelligent Systems

Robotic Systems:

Overview and Preliminaries Biological Paradigms: Robotic Manipulators

Sensors and Actuators: Low-Level Robot Control, Mobile Robots

Modelling Dynamic Systems Kinematics and Dynamics of Rigid Bodies: Continuous- and Discrete-time Dynamic Models; Linearization and Linear Response

Intelligent Systems:

Continuous- and Discrete-time Dynamic Models: Formal Logic and; Linearization, Turing Machines and Linear Response, Predicate Calculus; Crisp and Fuzzy Sets, Expert Systems: Inference and Knowledge Representation, Probability Theory

Introduction to Optimization and Numerical Optimization: Least-Squares Estimation

Monte Carlo Evaluation and Evolutionary Algorithms

Learning (Knowledge Acquisition) Classification of Data Sets

Computational Neural Networks :

Neural Networks: Training Neural Networks

Goal-Oriented Control :

Optimal Control, Robust, Adaptive, and Neural Control, Task Planning and Multi-Agent Systems

Reference Books:

Autonomous Robots, G. Bekey, MIT Press, 2005

Linear System Theory

Review of matrices and linear vector space including semigroup, group, rings and fields.

State variable modelling of continuous and discrete time systems, Linearization of state equations, Solutions of state equations of linear time-invariant and time-varying systems.

Controllability and Observability of dynamical systems

Minimal realization of linear systems and canonical forms

Liapunov's stability theory for linear dynamical systems.

Reference Books:

Linear System Theory, C.T.Chen

Soft Computing Technique and its Application in Engineering

Introduction to Soft Computing: Introduction, Importance of Soft Computing, Main Components of Soft Computing, Fuzzy Logic, Artificial Neural Networks, Introduction to Evolutionary Algorithms, Hybrid Intelligent Systems

Artificial Neural Network and Supervised Learning: Introduction, Comparison of Neural Techniques and Artificial Intelligence, Artificial Neuron Structure, Adaline Model, ANN Learning, Back-Propagation Learning, Properties of Neural Networks, Limitations in the Use of Neural Networks.

Factors Affecting the Performance of Artificial Neural Network Models

Network Complexity, Neuron Complexity, Number of Layers, Number of Neurons in Each Layer, Type and Number of Interconnecting Weights, Problem Complexity, Range of Normalization of Training Data, Type of Functional Mapping, Sequence of Presentation of Training Data, Repetition of Data in the Training Set, Permissible Noise in Data, Learning Complexity, Training Algorithms of ANN

Development of Generalized Neuron and Its Validation

Existing Neuron Model, Development of a Generalized Neuron (GN) Model, Advantages of GN, Learning Algorithm of a Summation Type Generalized Neuron, Benchmark Testing of Generalized Neuron Model, Ex-OR Problem, The Mackey-Glass Time Series, Character Recognition Problem

Applications of Generalized Neuron Models

Application of GN Models to Electrical Machine, Electrical Load Forecasting Problem, Load Frequency Control Problem, Power System Stabilizer Problem, Aircraft Landing Control System Using GN Model

Introduction to Fuzzy Set Theoretic Approach

Introduction, Uncertainty and Information, Types of Uncertainty, Introduction of Fuzzy Logic, Historical Development of Fuzzy Logic, Difference Between Precision and Significance, Fuzzy Set, Operations on Fuzzy Sets, Fuzzy Intersection, Fuzzy Union, Fuzzy Complement, Fuzzy Concentration, Fuzzy Dilation, Fuzzy Intensification, α -Cuts, Fuzzy Quantifier/Modifier/Hedges, Characteristics of Fuzzy Sets, Fuzzy Singleton, Height, Cardinality,

Properties of Fuzzy Sets: Commutative, Associative, Distributive Property, Idem Potency, Identity Involution, Excluded Middle Law, Law of Contradiction, Demorgan's Law, Transitive, Fuzzy Cartesian Product, Various Shapes of Fuzzy Membership Functions, Methods of Defining of Membership Functions, Fuzzy Compositional Operators, Fuzzy Relation, Operation of Fuzzy Relation, Projection and Cylindrical Extension, Approximate Reasoning, Defuzzification Methods, Fuzzy Rule Based System

Applications of Fuzzy Rule Based System

Introduction, System's Modeling and Simulation Using Fuzzy Logic Approach, Selection of Variables, their Normalization Range and the Number of Linguistic Values, Selection of Shape of Membership Functions for Each Linguistic Value, Determination of Overlapping of Fuzzy Sets, Selection of Fuzzy Intersection Operators, Fuzzy Union Operators, Implication Methods, Compositional Rule, Defuzzification Method,

Control Applications: Adaptive Control, PID Control System, Fuzzy Control System, Power System Stabilizer Using Fuzzy Logic

Genetic Algorithms

Introduction, History of Genetics, Genetic Algorithms, Crossover, Mutation, Survival of Fittest, Population Size, Evaluation of Fitness Function, Effect of Crossover Probability on GA Performance, Effect of Mutation Probability on GA Performance, Main Components of GA, Variants, Applications of Genetic Algorithms

Applications of Genetic Algorithms to Load Forecasting Problem

Integration of Neural Networks and Fuzzy Systems

Introduction, Adaptive Neuro-Fuzzy Inference Systems, Constraints of ANFIS, HIV/AIDS Population Model Using Neuro-Fuzzy Approach

ANN – GA-Fuzzy Synergism and Its Applications

Introduction, Training of ANN, Advantages of GA, ANN Learning Using GA, Validation and Verification of ANN-GA Model.

Reference Books:

Soft Computing Techniques and its Applications in Electrical Engineering
Devendra K. Chaturvedi, Springer

Fuzzy Logic with Engineering Applications
Timothy J Ross, John Wiley & Sons.

Neuro-Fuzzy and Soft Computing Lee Jng, Chuentaisun, E G Maizutani, PE India.

Recent topics in Modern communication Engineering

Recent upcoming technologies in area of modern digital/wireless communication is covered in subject.

Reference Books:

IEEE communication Magazine/conference/Journal papers.
